TIMELINE OF BUILDING MATERIAL AND BRAND DEFECTS

The chart below shows the years of manufacturing for defective building materials and brands. This chart is only intended as a general refrence and does not confirm that a home built within the effected year will contain the material. These materials were manufactured and available during these years however a builder may have chosen a diffrent material or brand to use during construction. A home built with these materials or brands may have been renovated and in the process the defect may have been eliminated. Also keep in mind that an older home that was renovated during the time a defective material or brand was available may contain one or more of the items below. For example a home built in 1935 and renovated in 1980 may have Polybutylene piping and Federal Pacific electrical panels.
